The Art Of The Metaobject Protocol:

   The Art of the Metaobject Protocol Gregor Kiczales,Jim Des Rivieres,Daniel G. Bobrow,1991-07-30 The authors introduce this new approach to programming language design describe its evolution and design principles and present a formal specification of a metaobject protocol for CLOS The CLOS metaobject protocol is an elegant high performance extension to the CommonLisp Object System The authors who developed the metaobject protocol and who were among the group that developed CLOS introduce this new approach to programming language design describe its evolution and design principles and present a formal specification of a metaobject protocol for CLOS Kiczales des Rivi res and Bobrow show that the art of metaobject protocol design lies in creating a synthetic combination of object oriented and reflective techniques that can be applied under existing software engineering considerations to yield a new approach to programming language design that meets a broad set of design criteria One of the major benefits of including the metaobject protocol in programming languages is that it allows users to adjust the language to better suit their needs Metaobject protocols also disprove the adage that adding more flexibility to a programming language reduces its performance In presenting the principles of metaobject protocols the authors work with actual code for a simplified implementation of CLOS and its metaobject protocol providing an opportunity for the reader to gain hands on experience with the design process They also include a number of exercises that address important concerns and open issues Gregor Kiczales and Jim des Rivi res are Members of the Research Staff and Daniel Bobrow is a Research Fellow in the System Sciences Laboratory at Xerox Palo Alto Research Center   **Fluent Python** Luciano Ramalho,2015-07-30 Python s simplicity lets you become productive quickly but this often means you aren t using everything it has to offer With this hands on guide you ll learn how to write effective idiomatic Python code by leveraging its best and possibly most neglected features Author Luciano Ramalho takes you through Python s core language features and libraries and shows you how to make your code shorter faster and more readable at the same time Many experienced programmers try to bend Python to fit patterns they learned from other languages and never discover Python features outside of their experience With this book those Python programmers will thoroughly learn how to become proficient in Python 3 This book covers Python data model understand how special methods are the key to the consistent behavior of objects Data structures take full advantage of built in types and understand the text vs bytes duality in the Unicode age Functions as objects view Python functions as first class objects and understand how this affects popular design patterns Object oriented idioms build classes by learning about references mutability interfaces operator overloading and multiple inheritance Control flow leverage context managers generators coroutines and concurrency with the concurrent futures and asyncio packages Metaprogramming understand how properties attribute descriptors class decorators and metaclasses work   **Object-Oriented Construction Handbook** Heinz Züllighoven,Robert F. Beeger,2005 Object oriented programming OOP has been the leading paradigm for developing software applications for at least 20 years Many different

methodologies approaches and techniques have been created for OOP such as UML Unified Process design patterns and eXtreme Programming Yet the actual process of building good software particularly large interactive and long lived software is still emerging Software engineers familiar with the current crop of methodologies are left wondering how does all of this fit together for designing and building software in real projects This handbook from one of the world s leading software architects and his team of software engineers presents guidelines on how to develop high quality software in an application oriented way It answers questions such as How do we analyze an application domain utilizing the knowledge and experience of the users What is the proper software architecture for large distributed interactive systems that can utilize UML and design patterns Where and how should we utilize the techniques and methods of the Unified Process and eXtreme Programming This book brings together the best of research development and day to day project work The strength of the book is that it focuses on the transition from design to implementation in addition to its overall vision about software development Bent Bruun Kristensen University of Southern Denmark Odense **ECOOP 2002 - Object-Oriented Programming** Boris Magnusson,2003-08-02 This book constitutes the refereed proceedings of the 16th European Conference on Object Oriented Programming ECOOP 2002 held in Malaga Spain in June 2002 The 24 revised full papers presented together with one full invited paper were carefully reviewed and selected from 96 submissions The book offers topical sections on aspect oriented software development Java virtual machines distributed systems patterns and architectures languages optimization theory and formal techniques and miscellaneous **Internet Applications** Lucas Chi-Kwong Hui,Dik Lun Lee,2004-02-02 This book constitutes the refereed proceedings of the 5th International Computer Science Conference ICSC 99 held in Hong Kong China in December 1999 The 30 revised full papers presented together with 30 short papers were carefully reviewed and selected from 80 submissions The book is divided into sections on information filtering data mining Web databases user interfaces modeling information retrieval workflow applications active networks mobility and distributed databases protocols distributed systems information retrieval and filtering Web technologies and e commerce Database and Expert Systems Applications Heinrich C. Padget,2006-12-31 The full title of the HCM network project behind this volume is VIM A virtual multicomputer for symbolic applications The three strands which bound the network together were parallel systems advanced compilation techniques andarti cialintelligence witha commonsubstrate in the programminglanguage Lisp The initial aim of the project was to demonstrate how the combination of these three technologies could be used to build a virtual multicomputer an ephemeral persistent machine of available heterogeneous computing resources for large scale symbolic applications The system would support a virtual processor abstraction to distribute data and tasks across the multicomputer the actual physical composition of which may change dynamically Our practical objective was to assist in the prototyping of dynamic distributed symbolic app cations in arti cial intelligence using whatever resources are available probably networked workstations so that the developed program could also be run on more exotic hardware without reprogramming What we had not foreseen at the outset of the project was how agents would unify the strands at the application level as distinct from the system level o lined above It was as a result of the agent in uence that we held two workshops in May and December 1997 with the title Collaboration between human and arti cial societies The papers collected in this volume are a selection from presentations made at those two workshops In each case the format consisted of a number of invited speakers plus presentations from the network partners   **Other Things** Bill Brown,2016-01-08 From the pencil to the puppet to the drone the humanities and the social sciences continue to ride a wave of interest in material culture and the world of things How should we understand the force and figure of that wave as it shapes different disciplines Other Things explores this question by considering a wide assortment of objects from beach glass to cell phones sneakers to skyscrapers that have fascinated a range of writers and artists including Virginia Woolf Man Ray Spike Lee and Don DeLillo The book ranges across the literary visual and plastic arts to depict the curious lives of things Beginning with Achilles s Shield then tracking the object thing distinction as it appears in the work of Martin Heidegger and Jacques Lacan Bill Brown ultimately focuses on the thingness disclosed by specific literary and artistic works Combining history and literature criticism and theory Other Things provides a new way of understanding the inanimate object world and the place of the human within it encouraging us to think anew about what we mean by materiality itself   **Advances in Computers** Marvin Zelkowitz,2009-07-13 This is volume 77 of Advances in Computers Since 1960 annual volumes are produced containing chapters by some of the leading experts in the field of computers today For 50 years these volumes offer ideas and developments that are changing our society This volume presents eight different topics covering many different aspects of computer science A wide range of subjects are covered from insights into the different ways individuals can interact with electronic devices to how common law is adapting to and impacting on the Internet   **Middleware 2001** Rachid Guerraoui,2007-11-22 This book constitutes the refereed proceedings of the IFIP ACM International Conference on Distributed Systems Platforms Middleware 2001 held in

Heidelberg Germany in November 2001 The 20 revised full papers presented were carefully reviewed and selected from a total of 116 submissions The papers are organized in topical sections on Java mobility distributed abstractions reliability home and office scalability and quality of service **Interactive Distributed Multimedia Systems** Doug Shepherd,Joe Finney,Laurent Mathy,Nicholas Race,2003-06-30 th We are very happy to present the proceedings of the 8 International Workshop on Interactive Distributed Multimedia Systems IDMS 2001 in co operation with ACM SIGCOMM and SIGMM These proceedings contain the technical programme for IDMS 2001 held September 4 7 2001 in Lancaster UK For the technical programme this year we received 48 research papers from both a demic and industrial institutions all around the world After the review process 15 were accepted as full papers for publication and a further 8 as short positional papers intended to provoke debate The technical programme was complimented by three invited papers QoS for Multimedia What s Going to Make It Pay by Derek McAuley E nabling the Internet to Provide Multimedia Services by Markus H mann and MPEG 21 Standard Why an Open Multimedia Framework by Fernando Pereira The organisers are very grateful for the help they received to make IDMS 2001 a successful event In particular we would like to thank the PC for their first class views of papers particularly considering the tight reviewing deadlines this year Also we would like to acknowledge the support from Agilent BTexact Technologies Hewlett Packard Microsoft Research Orange and Sony Electronics without whom IDMS 2001 would not have been such a memorable event We hope that readers will find these proceedings helpful in their future research and that IDMS will continue to be an active forum for the discussion of distributed mul media research for years to come **Self-Sustaining Systems** Robert Hirschfeld,Kim Rose,2008-10-22 This book constitutes the refereed proceedings of the First Workshop on Self sustaining Systems S3 held in Potsdam Germany in May 2008 S3 is a forum for discussion of topics relating to computer systems and languages that are able to bootstrap implement modify and maintain themselves One property of these systems is that their implementation is based on small but powerful abstractions examples include amongst others Squeak Smalltalk COLA Klein Self PyPy Python Rubinius Ruby and Lisp Such systems are the engines of their own replacement giving researchers and developers great power to experiment with and explore future directions from within their own small language kernels **Concepts, Techniques, and Models of Computer Programming** Peter Van Roy,Seif Haridi,2004-02-20 Teaching the science and the technology of programming as a unified discipline that shows the deep relationships between programming paradigms This innovative text presents computer programming as a unified discipline in a way that is both practical and scientifically sound The book focuses on techniques of lasting value and explains them precisely in terms of a simple abstract machine The book presents all major programming paradigms in a uniform framework that shows their deep relationships and how and where to use them together After an introduction to programming concepts the book presents both well known and lesser known computation models programming paradigms Each model has its own set of techniques and each is included on the basis of its usefulness in practice The general models include declarative

programming declarative concurrency message passing concurrency explicit state object oriented programming shared state concurrency and relational programming Specialized models include graphical user interface programming distributed programming and constraint programming Each model is based on its kernel language a simple core language that consists of a small number of programmer significant elements The kernel languages are introduced progressively adding concepts one by one thus showing the deep relationships between different models The kernel languages are defined precisely in terms of a simple abstract machine Because a wide variety of languages and programming paradigms can be modeled by a small set of closely related kernel languages this approach allows programmer and student to grasp the underlying unity of programming The book has many program fragments and exercises all of which can be run on the Mozart Programming System an Open Source software package that features an interactive incremental development environment **Industrial and Engineering Applications of Artificial Intelligence and Expert Systems** Manton Matthews,Don Potter,Moonis Ali,2020-01-08 This book presents the Proceedings of the Tenth International Conference on Industrial and Engineering Applications of Artificial Intelligence and Expert Systems focusing on the theoretical aspects of intelligent systems research as well as extensions of theory of intelligent thinking machines Architecting Dependable Systems II Rogério de Lemos,Cristina Gacek,Alexander Romanovsky,2004-11-29 As software systems become ubiquitous the issues of dependability become more and more critical Given that solutions to these issues must be taken into account from the very beginning of the design process it is appropriate that dependability is addressed at the architectural level This book results from an effort to bring together the research communities of software architectures and dependability Inspired by the ICSE 2003 Workshop on Software Architectures for Dependable Systems the book focuses on topics relevant to improving the state of the art in architecting dependable systems The 15 thoroughly reviewed papers originate partly from the workshop others were solicited in order to achieve complete coverage of all relevant aspects The papers are organized into topical sections on architectures for dependability fault tolerance in software architectures dependability analysis in software architectures and industrial experience
