Motion Capture at Moov studios Montreal Marc Morisseau motion editor for Avatar and a Chinese Motion Capture suit manufacturer *Animation and Performance Capture Using Digitized Models* Edilson de Aguiar, 2009-12-08 The realistic generation of virtual doubles of real world actors has been the focus of computer graphics research for many years However some problems still remain unsolved it is still time consuming to generate character animations using the traditional skeleton based pipeline passive performance capture of human actors wearing arbitrary everyday apparel is still challenging and until now there is only a limited amount of techniques for processing and modifying mesh animations in contrast to the huge amount of skeleton based techniques In this thesis we propose algorithmic solutions to each of these problems First two efficient mesh based alternatives to simplify the overall character animation process are proposed Although abandoning the concept of a kinematic skeleton both techniques can be directly integrated in the traditional pipeline generating animations with realistic body deformations Thereafter three passive performance capture methods are presented which employ a deformable model as underlying scene representation The techniques are able to jointly reconstruct spatio temporally coherent time varying geometry motion and textural surface appearance of subjects wearing loose and everyday apparel Moreover the acquired high quality reconstructions enable us to render realistic 3D Videos At the end two novel algorithms for processing mesh animations are described The first one enables the fully automatic conversion of a mesh animation into a skeletonbased animation and the second one automatically converts a mesh animation into an animation collage a new artistic style for rendering animations The methods described in the thesis can be regarded as solutions to specific problems or important building blocks for a larger application As a whole they form a powerful system to accurately capture manipulate and realistically render realworld human performances exceeding the capabilities of many related capture techniques By this means we are able to correctly capture the motion the timevarying details and the texture information of a real human performing and transform it into a fully rigged character animation that can be directly used by an animator or use it to realistically display the actor from arbitrary viewpoints **MoCap for Artists** Midori Kitagawa, Brian Windsor, 2020-10-14 Make motion capture part of your graphics and effects arsenal This introduction to motion capture principles and techniques delivers a working understanding of today s state of the art systems and workflows without the arcane pseudocodes and equations Learn about the alternative systems how they have evolved and how they are typically used as well as tried and true workflows that you can put to work for optimal effect Demo files and tutorials provided on the downloadable resources deliver first hand experience with some of the core processes **Autodesk Maya 2020 Character Animation Book** Serdar Hakan DÜZGÖREN, Character Animation Before you animate the characters and objects in your scene set up the scene by rigging all your characters and by applying the appropriate constraints and deformers to all the objects you want to animate Rigging a character also known as character setup involves creating skeletons and IK handles for your characters binding skins to the skeletons and setting up deformers and constraints You can also create deformers for

your character and animate them to produce effects for example the jiggling belly jiggle deformer furrowing brow wire deformer and flexing biceps lattice deformer of a sumo wrestler model Non character objects are also very important to bringing your scene to life You can limit and control the transformations of objects by constraining them to characters or other models in your scene You can also create deformers for objects to create complex deformation effects For example you can apply a squash deformer to the model of a ball and then parent constrain the ball to the hands of a character With this setup you can key the weights of the character s hands and the squash deformer s attributes to create an animation of the character bouncing the ball from hand to hand while the ball squashes on the ground and stretches as it rises back into the air In addition to setting up characters and objects for animation you can set up Maya Dynamics for animation You can constrain dynamic objects such as particle emitters fields and fluids to objects or characters in your scene For more information see nDynamics Simulation Framework and Fluid Effects *Handbook of Virtual Humans* Nadia
