NAME _____

Going **DEEP** with PLATE TECTONICS

Study Goals and Practices

How do mountains form? Why do earthquakes happen? What is a volcano and why does it erupt? Throughout recorded human history there were always questions like these trying to understand how or why these events happened. Scientists such as these had no plenty of evidence from thousands of scientists over the past century to find the answers. These answers were found from the collected facts and evidence. There was a theory to explain it all... the Theory of Plate Tectonics!

The theory explains Earth in which it major and it minor tectonic plates move about on top of the asthenosphere. Whether they are colliding, dividing, or sliding, these plates are always in motion. Where these plates meet, called "plate boundaries", is where most of the earthquakes and volcanoes on Earth happen.

The Theory of Plate Tectonics understands that the Earth forms new crust at the mid-ocean ridges. This crust begins to move outward to either side of the ridge. As it moves, it is forced below another plate where it is recycled back into magma. For now the geological future, this recycled crust emerges again at a mid-ocean ridge.

What causes the plates to move around? It's very simple really! It's called convection. Think of how boiling water in a pot moves... the hotter water rises up, then, as the water moves to the pot's edge, it is forced back down to the heated part up again. Inside the Earth, instead of circulating water, it is circulating magma.

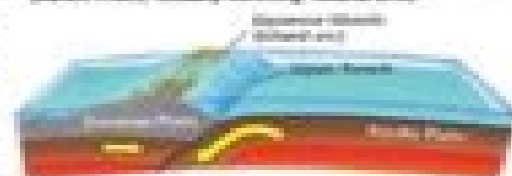

There are THREE types of plate boundaries: Divergent, Convergent, and Transformal. Each of these give rise to new landforms and can cause many natural disasters.

Divergent Plate Boundaries are where plates are moving away from each other. This movement is found along mid-ocean ridges where new crust material is being formed.

Convergent Plate Boundaries are where one plate subducts under crust that is less dense to be recycled back into the asthenosphere. There are three types of convergent plate boundaries:

- **Ocean to Ocean:** when the crust of two oceanic plates meet, usually forming island arcs.

- **Ocean to Continental:** when oceanic crust subducts under continental crust forming mountain chains and volcanic activity.

- **Continental to Continental:** when two continental plates meet and buckle up forming large mountains.

Transform Plate Boundaries are where plates move side by side with each other resulting in frequent earthquakes.

Boundary Type	Stress Type
Divergent	Tension
Convergent	Compression
Transform	Shear

Boundary Type	Stress Type
Divergent	Tension
Convergent	Compression
Transform	Shear
San Andreas Fault	Shear

4. The type of the fault provides the force that creates the compressional-tensional shear and creates the tectonic plates. Describe what would happen as the Earth's core cools deeper over billions of years?

5. What are the different ways in which the tectonic plates interact with each other as they move around?

Geology and Mineral Resources of West Africa Wright, 2012-12-06 In this text attention is focused mainly on those literature is accessible however it is to be expected countries in western Africa lying south of the Sahara that teachers and lecturers will know of it and will be that is between about SON and 15 N and westward able to acquaint their students with it where neces of about 15 E Parts of the region as far north as sary about 200N are considered from time to time for A glossary of terms is provided at the end of the purposes of correlation and cQntinuity The map on volume and there is a summary at the beginning of p xiii indicates the approximate extent of the cover each chapter age This book is dedicated to the many

colleagues and The principal aim is to provide a broad view of students with whom we have worked in West Africa West African geology as a whole for undergraduates and who have stimulated and encouraged our teach who are studying for honours degrees in geology and ing and research in various ways We hope also that it may help the work of international organizations who already have an understanding of basic geologi cal principles It is increasingly important that such as AGID CIFEG and UNESCO to encourage the growing trend towards geological co operation geologists working in this region should see it as made up of geological provinces which transcend and correlation between different countries in West national boundaries Africa
