Designing Thriving Systems Leslie J. Waguespack,2019-04-10 This monograph illuminates a design mindset for systems artefacts that not only survive but thrive Of itself an artefact is devoid of design quality until encountered in a specific social context by human attendants Design quality is the affect of an intertwining of a an artefact s structural and behavior properties b an attendant humanly conception of quality an appreciative system and c the enfolding social context of their encounter To pursue quality in design is to interweave these three strands bound as a durable cord that evokes a visceral satisfaction or the delight of a ringing musical chord The human consciousness of design quality is fundamentally metaphoric and dynamic a perception of reality mediated by a personal value disposition In the continuum of experience living moment after moment both the attendant s metaphorical appreciation and their sense of quality evolve And thus design quality issues from perpetual concentric cycles of design construct experience learn assess calibrate over the life span of relationship with an artefact Design as a verb s purpose is to service the life in that relationship sustain its survival and hopefully raise that life to a state of thriving Design quality manifests throughout the cycles of design as a verb rather than as a product of it Such is the mindset in which the designer must indwell and that design education must nurture While all artefacts are systems the domain of artefact design of which I am most experienced is computing systems Therefore I will rest upon that domain to explore a theory and practice of design as a verb designing thriving systems **The Cybersecurity Body of Knowledge** Daniel Shoemaker,Anne Kohnke,Ken Sigler,2020-04-08 The Cybersecurity Body of Knowledge explains the content purpose and use of eight knowledge areas that define the boundaries of the discipline of

cybersecurity The discussion focuses on and is driven by the essential concepts of each knowledge area that collectively capture the cybersecurity body of knowledge to provide a complete picture of the field This book is based on a brand new and up to this point unique global initiative known as CSEC2017 which was created and endorsed by ACM IEEE CS AIS SIGSEC and IFIP WG 11 8 This has practical relevance to every educator in the discipline of cybersecurity Because the specifics of this body of knowledge cannot be imparted in a single text the authors provide the necessary comprehensive overview In essence this is the entry level survey of the comprehensive field of cybersecurity It will serve as the roadmap for individuals to later drill down into a specific area of interest This presentation is also explicitly designed to aid faculty members administrators CISOs policy makers and stakeholders involved with cybersecurity workforce development initiatives The book is oriented toward practical application of a computing based foundation crosscutting concepts and essential knowledge and skills of the cybersecurity discipline to meet workforce demands Dan Shoemaker PhD is full professor senior research scientist and program director at the University of Detroit Mercy s Center for Cyber Security and Intelligence Studies Dan is a former chair of the Cybersecurity Information Systems Department and has authored numerous books and journal articles focused on cybersecurity Anne Kohnke PhD is an associate professor of cybersecurity and the principle investigator of the Center for Academic Excellence in Cyber Defence at the University of Detroit Mercy Anne s research is focused in cybersecurity risk management threat modeling and mitigating attack vectors Ken Sigler MS is a faculty member of the Computer Information Systems CIS program at the Auburn Hills campus of Oakland Community College in Michigan Ken s research is in the areas of software management software assurance and cybersecurity
