

O Level Human and Social Biology (5096)

How many lessons per week will I need to cover the syllabus?

This partly depends on what your students have done before they begin their O Level course. If they have been in your Centre for some years beforehand, then you may have been able to begin building up their knowledge and skills already. If they come to you from many different backgrounds, then you may need to do more work with them to prepare them for O Level. As a rough guideline, many Centres teach their O Level Human and Social Biology students for about 2 hours 30 minutes per week over a 2-year period, but it is not unusual for the time allocated to be significantly more or less than this. You should try to have one relatively long session each week, so that your students can carry out practical work.

There is no Practical paper, so my students don't need any laboratory experience, do they?

Yes, they do need to have some laboratory experience. The theory paper contains questions that are about practical work and set in practical contexts. The syllabus makes it clear, in the Aims, in both Assessment Objectives A and B, in the Scheme of Assessment and in the Subject Content, that the course should have a practical component and that candidates should have some experience of doing (as well as seeing) experimental work. The questions in the theory paper will assess practical skills, including both data handling and familiarity with standard laboratory equipment. Any candidates without experience of doing practical work will be disadvantaged in this paper.

The Subject Content listing in the syllabus identifies suggestions for practical work with an *. Using practical work as a teaching tool gives students the opportunity to learn by hands-on doing. Practical work is thus an excellent way of enabling candidates to build an understanding of specific theoretical perspectives of Human and Social Biology. A Human and Social Biology qualification without any practical component at all would be a second-rate assessment of the subject, and CIE aims to provide valid qualifications acceptable in all areas of the world.

What equipment should we have in our laboratories?

Much useful information is given in Cambridge International Examination's booklet *Planning for Practical Science in Secondary Schools*, (New Edition June 2002) available free from our publications department. In order to fulfil the practical suggestions in the O Level Human and Social Biology syllabus the following equipment and materials could be used:

- Access to a microscope sufficient to see plant and animal cells (1h)
- Visking (dialysis) tubing) (onion epidermis (needs a microscope) or citrus fruit cells are suggested as alternatives) (1j)
- Benedict's reagent, iodine in potassium iodide solution (often termed iodine solution), biuret reagent (or 1 mol dm^{-3} sodium hydroxide solution and 0.5 mol dm^{-3} copper sulphate solution), absorbent paper suitable for the grease spot test (3a)
- Disclosing tablets to show bacteria on teeth (diluted food colouring may work if these are not available) (4c)
- Amylase enzyme (diastase will work well and is cheap), starch suspension (made fresh by boiling starch in water and filtering to remove starch grains), iodine solution (see above), source of heat (e.g. bunsen burner or gas ring or hot plate), 1 mol dm^{-3} sodium hydroxide solution and 1 mol dm^{-3} hydrochloric acid solution (to be added 1 drop at a time to change pH), universal indicator paper or liquid with colour chart to measure pH (4e)
- Lime water or bicarbonate indicator (6f)
- Large bowl of water, smaller bowl and plastic tube (6g)
- Filter pump to connect to tap, to draw on lit cigarette, cotton wool to absorb tar, universal indicator paper or liquid to measure pH (6g)
- Human skeleton or model of skeleton; human, animal or model joint (articulated skeleton hanging from a hook is best, but a bag of bones is useful) (7g)
- Sharp knife to cut up kidney (8b) cow, sheep or goat eye (9c)
- Piece of board with pins stuck in it, so the pin heads (blunt end) can be gently rested on skin (9b)
- Long (metre) ruler for dropping for reaction time testing (9n)

Social Neuroscience Russell K. Schutt, Larry J. Seidman, Matcheri S. Keshavan, 2015-06-09 Human beings evolved in the company of others and flourish in proportion to their positive social ties To understand the human brain we must situate its biology in the wider context of society To understand society we must also consider how the brains and minds of individuals shape interactions with other human beings Social Neuroscience offers a comprehensive new framework for studying the brain

human development and human behavior In this book leading researchers in the fields of neurobiology psychiatry psychology and sociology elucidate the connections between brain biology and the brain s functioning in the social world providing a state of the art interdisciplinary explanation of how humans think and act as well as the ways we define and treat pathological behavior Synthesizing the insights and perspectives of these experts Social Neuroscience examines how neural processes make the brain sensitive to social experience how cognition shapes social behavior and how social networks create a range of responses among different individuals to the same environmental stimuli The mutually reinforcing connections between brain mind and society have profound implications for human health from the emotionally damaging effects of severe social deprivation to the neurological impact of parental abuse and neighborhood violence The authors explore these connections with special focus on mental illnesses including schizophrenia a disorder characterized by marked social deficits in which a neurological basis is now well established

Botswana Notes and Records ,1985 Levels of Organic Life and the Human Helmuth Plessner,2021-05-20 The groundbreaking classic of twentieth century German philosophy now available in English with an introduction by J M Bernstein Helmuth Plessner s Levels of Organic Life and the Human draws on phenomenological biological and social scientific sources to offer a systematic account of nature life and human existence The book considers non living nature plants non human animals and human beings a sequence of increasingly complex modes of boundary dynamics simply put interactions between a thing s insides and the surrounding world Living things are classed and analyzed by their positionality or orientation to and within an environment According to Plessner s radical view the human form of life is excentric that is the relation between body and environment is something to which humans themselves are positioned and can take a position This excentric positionality enables human beings to take a stand outside the boundaries of their own body a possibility with significant implications for knowledge culture religion and technology A powerful and sophisticated account of embodiment the Levels shows with reference both to science and to philosophy how life can be seen on its own terms to establish its own boundaries and how from the standpoint of life the human establishes itself in relation to the nonhuman As such the book is not merely a historical monument but a source for invigorating a range of vital current conversations around the animal posthumanism the material turn and the biology and sociology of cognition

Neuroscience Notes Stephen Gislason MD,2018-03-14 In this book I have selected topics that are representative of neuroscience inquiry retaining brief references to a larger context that includes the study of neurology anthropology paleontology computer science and philosophy There have been several attempts to develop a theory of brain function that incorporates a large collection of observations experimental results and a growing understanding of the innate features of human nature I doubt that a single theory is feasible and suggest that the goal is integration of knowledge from diverse disciplines into a comprehensive understanding of who we are and why we are the way we are

Notes - Municipal Reference and Research Center Municipal Reference and Research Center (New York, N.Y.),1952 Marx and Education

in Late Capitalism R. F. Price, 1986-01-01 The major premise of this book is that efforts to construct a Marxist analysis of education centered on schools and schooling are misdirected. Instead, the author contends that explorations of education must more importantly focus on the valuable learning experiences that occur outside the classroom. Using Marx's own writings as a guide to interpreting past and present events, the author explores how education should be conceptualized in order to liberate working people. He identifies those aspects of education linked with the specifically capitalist nature of our societies and those that give hope of the cooperative responsible society that Marx anticipated.

Morality: A Natural History Roger V. Moseley, 2019-10-17 What is morality and what is the source of our moral ideas? Philosophers have explored these questions for centuries, suggesting that both emotion and reason play roles but failing to explain how and why *Homo sapiens* developed these ideas. Author Roger Moseley argues that evolutionary forces that optimize human welfare provide the missing explanation. *Morality: A Natural History* presents a multi-disciplinary analysis of the topic and reveals a common thread among the seemingly diverse fields of religion, neuroscience, experimental psychology, and game theory, child development, evolution, and animal behavior, and anthropology and sociology. When humans first appeared, a simple self-interested survival morality sufficed. As societies became more complex, however, rules of behavior became necessary to limit conflict and promote cooperation. The brain evolved, producing language that allowed the articulation of moral ideas which were codified and enforced by religion and social forces. No species lasts forever, and it is at our peril today that we neglect those evolved moral values of cooperation, altruism, truthfulness, and empathy. Rooted in scientific evidence and interspersed with personal anecdotes and humorous observations, Moseley provides a unique perspective on the natural history of morality: how it appeared, evolved, and continues to evolve today. *Morality: A Natural History* is essential reading for academics and laypersons alike who seek to understand the origin and essence of human morality.
