what is load balancing how load balancers work nginx - Oct 08 2023

web load balancing refers to efficiently distributing incoming network traffic across a group of backend servers also known as a server farm or server pool modern high traffic websites must serve hundreds of thousands if not millions of concurrent requests from users or clients and return the correct text images video or application data

server load balancer fundamentals what it means and how it - Apr 02 2023

web server load balancing is a technology that enables your websites and applications to keep up the performance despite a high volume of traffic or sudden spikes it does so by sending or splitting the traffic over to various servers when this process is carried out globally it s called global server load balancing gslb

what are load balancers how to effectively distribute incoming - May 23 2022

web aug 11 2022 load balancers are infrastructure components which distribute incoming network traffic between multiple backend servers they improve capacity and add redundancy by keeping services accessible if one of your servers fails load balancers act as the public gateway to your application

what is load balancing coursera - Sep 26 2022

web jul 25 2023 load balancing is the act of distributing incoming network traffic across backend servers to balance the amount of traffic across a pool of servers it allows applications to perform better by sending requests to multiple servers decreasing the burden of managing and maintaining network sessions

an overview of load balancers and how they work zenlayer - Aug 26 2022

web nov 5 2023 layer 4 load balancers prioritize routing to servers that are the least loaded based on the number of active connections how many requests the server is working on or their response times how busy the server is an example of an algorithm that s often used in layer 4 load balancing is known as round robin round robin works by routing

load balancing computing wikipedia - Jun 04 2023

web server side load balancers for internet services a server side load balancer is usually a software program that is listening on the port where external clients connect to access services the load balancer forwards requests to one of the backend servers which usually replies to the load balancer

what is load balancing ibm - Mar 01 2023

web in order to prevent a single server from becoming overloaded the load balancer routes requests to any number of

available servers on premises or hosted in server farms or cloud data centers once the assigned server receives the request it responds to the client by way of the load balancer
