Architecture and Energy William Braham, Daniel Willis, 2013-07-18 Does energy consumption influence architectural style

Should more energy efficient buildings look different Can that look be used to explain or enhance their performance Architecture and Energy provides architects and architectural theorists with more durable arguments for environmental design decisions arguments addressing three different scales or aspects of contemporary construction By drawing together essays from the leading experts in the field this book engages with crucial issues in sustainable design such as The larger role of energy in forming the cultural and economic systems in which architecture is conceived constructed and evaluated The different measures and meanings of energy performance and how those measures are realized in buildings The specific ways in which energy use translates into the visible aspects of architectural style Drawing on research from the UK US Europe and Asia the book outlines the problems surrounding energy and architecture and provides the reader with a considered overview of this important topic Parametric Cost Modeling for Buildings Donald E. Parker,2014-05-23 Successful cost management and value engineering in construction is based on accurate and early estimations of cost and this book is the quickest route to creating a cost plan from scratch The budgeting system described in this book will help the reader to document project scope at a level that provides excellent cost control at design stage establish the parameters of potential sites before selecting one determine the amount of financing needed before deciding to bid on a project make a detailed and robust building project budget determine the rental rate necessary to see if a building project will be marketable The technique used is a parametric cost system not the square foot cost system used by most who quote an up front building cost To help calculate the parameter quantities and price them as quantified this book comes with 5 electronic templates to calculate program scope i e space configuration HVAC loads plumbing and electrical It also includes the author s parametric cost database and cost template to prepare the construction estimate a soft cost template to price out all related program costs convert them to a monthly cash flow incorporate financing costs and then reveal the final budget an operation and maintenance annual cost template to calculate those variable and fixed costs necessary to run the building and then convert the result into the necessary rental rate to capitalize all costs The spreadsheets data advice and templates are all introduced through a detailed case study placing everything in an easy to understand practical context This will prove an invaluable guide not only for estimators and cost engineers but also developers clients and architects **RS Means Plumbing Cost Data** ,1997 *Electrical Costs with Rsmeans Data* Rsmeans,2019-10 Resources for all types of estimators including contractors designers and engineers The latest costs for green building materials including LED light fixtures wind turbines electrical meters car charging stations and more Electrical Change Order Costs with RSMeans Data Rsmeans,2017-10-31 This wellorganized reference provides over 20 000 unit cost entries for use in estimating change orders It is complete and current with newly updated pricing for both pre and post installation change order situations Solar Energy Andy Walker,2013-08-07 Solar Energy is an authoritative reference on the design of solar energy systems in building projects with applications operating principles and simple tools for the construction engineering and design professional The book

simplifies the solar design and engineering process providing sample documentation and special tools that provide all the information needed for the complete design of a solar energy system for buildings to enable mainstream MEP and design firms and not just solar energy specialists to meet the growing demand for solar energy systems in building projects

Geothermal Energy Mary H. Dickson, Mario Fanelli, 2013-07-04 Geothermal energy refers to the heat contained within the Earth that generates geological phenomena on a planetary scale Today this term is often associated with man's efforts to tap into this vast energy source Geothermal Energy utilization and technology is a detailed reference text describing the various methods and technologies used to exploit the earth's heat Beginning with an overview of geothermal energy and the state of the art leading international experts in the field cover the main applications of geothermal energy including electricity generation space and district heating space cooling greenhouse heating aquaculture industrial applications The final third of the book focuses upon environmental impact and economic financial and legal considerations providing a comprehensive review of these topics Each chapter is written by a different author but to a set style beginning with aims and objectives and ending with references self assessment questions and answers Case studies are included throughout Whilst written primarily for professionals and students interested in learning more about geothermal energy the book also offers those new to the field and the general geothermal community an opportunity to understand and review the potential of this exciting alternative energy source Published with UNESCO

Energy Efficiency in Buildings José Manuel Andújar, Sergio Gómez Melgar, 2020-04-28 Buildings are one of the main causes of the emission of greenhouse gases in the world Europe alone is responsible for more than 30% of emissions or about 900 million tons of CO₂ per year Heating and air conditioning are the main cause of greenhouse gas emissions in buildings Most buildings currently in use were built with poor energy efficiency criteria or depending on the country and the date of construction none at all Therefore regardless of whether construction regulations

are becoming stricter the real challenge nowadays is the energy rehabilitation of existing buildings It is currently a priority to reduce or ideally eliminate the waste of energy in buildings and at the same time supply the necessary energy through renewable sources The first can be achieved by improving the architectural design construction methods and materials used as well as the efficiency of the facilities and systems the second can be achieved through the integration of renewable energy wind solar geothermal etc in buildings In any case regardless of whether the energy used is renewable or not the efficiency must always be taken into account The most profitable and clean energy is that which is not consumed
