Questions

Below is a list of questions to be addressed as a result of this requirements document:

Question	Outcome
What about Google Apps	<ul style="list-style-type: none">• We think this is important, but not for version one.• We can look at this at a later stage.• 💡 It might be worth someone looking into a shared notification library to do this.
Are we supporting Blackberry?	<ul style="list-style-type: none">• Again, not for initial version - but we haven't had much demand for this.
Should we have an offline mode?	<ul style="list-style-type: none">• We've talked about the pros and cons. In brief:<ul style="list-style-type: none">➕ Seamless experience for customers, they won't notice if there is a connection issue➕ Most of our competitors don't have this➖ Could be expensive to build❓ Should we spike this at a later sprint?

Not Doing

- Google Apps Authentication - out of scope, see above for details
- Blackberry support - we won't look at doing this, if demand picks up we can look at it.
- Native app. We are starting with a mobile web view first and get back to a native app depending on feedback that we get.

Application Level Security Management Michael Neuhaus, 2005-04-25

Inhaltsangabe Abstract Today more and more enterprises are developing business applications for Internet usage which results in the exposure of their sensitive data not only to customers and business partners but also to hackers Because web applications provide the interface between users sitting somewhere within the World Wide Web and enterprises backend resources hackers can execute sophisticated attacks that are almost untraceable aiming to steal modify or delete enterprises vital data even when it is protected by passwords or encryption As recent viruses and worms such as Nimda CodeRed or MSBlast have shown modern attacks are occurring at the application itself since this is where high value information is most vulnerable Such attack scenarios are becoming very problematic nowadays since traditional network security products such as firewalls or network intrusion detection systems are completely blind to those malicious activities and therefore can not offer

any protection at all Modern protection mechanisms require more sophisticated detection capabilities in order to protect enterprises assets from such attacks now and in the future Additionally web application security currently is a highly dynamic and also very emerging field within enterprises IT security activities Therefore this diploma thesis aims to provide a strong focussed picture on the current state of web application security and its different possibilities to raise the overall security level of already implemented web applications and also of future web applications Acting as a basis for further analysis the currently most common web application vulnerabilities are described to get an overview of what a web application has to be protected of and where the root problems of these weaknesses are lying Although these generic categories may not be applicable to every actually implemented web application they may be used as baseline for future web applications Armed with the background of the current vulnerabilities and their related root causes a detailed analysis of currently available countermeasures will provide recommendations that may be taken at each of the certain stages of a web application s lifecycle Since all further decisions generally should be based upon risk evaluations of specifically considered systems a possible risk management assessment methodology is provided within the thesis Controls and countermeasures are provided from an

Practical Security for Agile and DevOps Mark S. Merkow, 2022-02-14 This textbook was written from the perspective of someone who began his software security career in 2005 long before the industry began focusing on it This is an excellent perspective for students who want to learn about securing application development After having made all the rookie mistakes the author realized that software

security is a human factors issue rather than a technical or process issue alone Throwing technology into an environment that expects people to deal with it but failing to prepare them technically and psychologically with the knowledge and skills needed is a certain recipe for bad results Practical Security for Agile and DevOps is a collection of best practices and effective implementation recommendations that are proven to work The text leaves the boring details of software security theory out of the discussion as much as possible to concentrate on practical applied software security that is useful to professionals It is as much a book for students own benefit as it is for the benefit of their academic careers and organizations Professionals who are skilled in secure and resilient software development and related tasks are in tremendous demand This demand will increase exponentially for the foreseeable future As students integrate the text s best practices into their daily duties their value increases to their companies management community and industry The textbook was written for the following readers Students in higher education programs in business or engineering disciplines AppSec architects and program managers in information security organizations Enterprise architecture teams with a focus on application development Scrum Teams including Scrum Masters Engineers developers Analysts Architects Testers DevOps teams Product owners and their management Project managers Application security auditors Agile coaches and trainers Instructors and trainers in academia and private organizations
