

Product Design

Define the product vision

Before you start working on the product, you must first understand what it stands for. It's now or never for the product team to identify the product vision and plan.

1

2

Product research

Conduct a thorough analysis before making any product decisions to increase the chances of success. Keep in mind that time spent researching is never lost.

3

User analysis

The analysis phase aims to glean information from the data gathered during the product testing phase. UX designers may begin to understand why users want, think, or need something.

5

Design

By now, the product team should have a good idea of what they're trying to accomplish. During the design process, the product team will start developing and implementing solutions to solve the client's dilemma.

4

The ideation process is when team members come up with a variety of new concepts to solve the project's objectives. It's crucial not only to develop ideas during this process but also to double-check that the most relevant design assumptions are right.

Ideation

6

Testing and validation.

By now, the product team should have a good idea of what they're trying to accomplish. During the design process, the product team will start developing and implementing solutions to solve the client's dilemma.

Post-launch activities

Just because a product has been released doesn't mean the design process is over. Product design is, in reality, an ongoing process that lasts as long as a product is in use. The team will learn from experience and develop the product.
