Wireless World , 1929 **Total Undersea War** Aaron S Hamilton, 2020-05-30 During the last year of World War II the once surface bound diesel electric U boat ushered in the age of total undersea war with the introduction of an air mast or snorkel as it became known among the men who served in Dnitz's submarine fleet U boats no longer needed to surface to charge batteries or refresh air they rarely communicated with their command operating silently and alone among the shallow

coastal waters of the United Kingdom and across to North America At first U boats could remain submerged continuously for a few days then a few weeks and finally for months at a time and they set underwater endurance records not broken for nearly a quarter of a century The introduction of the snorkel was of paramount concern to the Allies who strived to frustrate the impact of the device before war s end Every subsequent wartime U boat innovation was subordinated to the snorkel including the new Type XXI Electro boat wonder weapon The snorkel s introduction foreshadowed the nearly un trackable weapon and instrument of intelligence that the submarine became in the postwar world This exhaustive study the first of its kind draws upon wartime documents from archives around the world to re evaluate the last year of the U boat s deployment all its key technological innovations the evolving operations and tactics and Allied countermeasures It provides answers to many long standing questions about the last year of the war How and why did U boats patrol so close inshore How effective was acoustic and anti radar camouflage Why was U boat wireless communication so problematic How did U boats navigate so effectively submerged What were the health implications of staying submerged for a month or more What does an accurate snorkel configuration look like This new study is destined to become the authoritative reference for all these issues and many more
