Physical Modelling in Geotechnics, Volume 1 Andrew McNamara, Sam Divall, Richard Goodey, Neil Taylor, Sarah Stallebrass, Jignasha Panchal, 2018-07-11 Physical Modelling in Geotechnics collects more than 1500 pages of peer reviewed papers written by researchers from over 30 countries and presented at the 9th International Conference on Physical Modelling in Geotechnics 2018 City University of London UK 17 20 July 2018 The ICPMG series has

grown such that two volumes of proceedings were required to publish all contributions. The books represent a substantial body of work in four years. *Physical Modelling in Geotechnics* contains 230 papers including eight keynote and themed lectures representing the state of the art in physical modelling research in aspects as diverse as fundamental modelling including sensors imaging modelling techniques and scaling onshore and offshore foundations dams and embankments retaining walls and deep excavations ground improvement and environmental engineering tunnels and geohazards including significant contributions in the area of seismic engineering. ISSMGE TC104 have identified areas for special attention including education in physical modelling and the promotion of physical modelling to industry. With this in mind there is a special themed paper on education focusing on both undergraduate and postgraduate teaching as well as practicing geotechnical engineers. Physical modelling has entered a new era with the advent of exciting work on real time interfaces between physical and numerical modelling and the growth of facilities and expertise that enable development of so called megafuges of 1000gtonne capacity or more capable of modelling the largest and most complex of geotechnical challenges. *Physical Modelling in Geotechnics* will be of interest to professionals engineers and academics interested or involved in geotechnics geotechnical engineering and related areas. The 9th International Conference on Physical Modelling in Geotechnics was organised by the Multi Scale Geotechnical Engineering Research Centre at City University of London under the auspices of Technical Committee 104 of the International Society for Soil Mechanics and Geotechnical Engineering. ISSMGE City University of London are pleased to host the prestigious international conference for the first time having initiated and hosted the first regional conference Eurofuge ten years ago in 2008. Quadrennial regional conferences in both Europe and Asia are now well established events giving doctoral researchers in particular the opportunity to attend an international conference in this rapidly evolving specialist area. This is volume 1 of a 2 volume set.

Radio Wave Propagation Chas. R. Burrows, 2013-10-22. Radio Wave Propagation Consolidated Summary Technical Report of the Committee on Propagation of the National Defense Research Committee presents all the scientific information and report of experiments. This book discusses the problems encountered in the propagation of radio waves. Organized into three volumes this book begins with an overview of the technical developments in the study of tropospheric propagation. This text then outlines the general theory of standard and nonstandard propagation together with descriptions and results of transmission experiments designed to test the theory. Other chapters consider the more unusual problems concerning the radar behavior of targets. This book discusses as well the problems of radio wave propagation in the standard atmosphere at frequencies above 30 megacycles. The final chapter deals with the selection and utilization of local terrain features that affect propagation and the performance of equipment. This book is a valuable resource for scientists and engineers in the field of radio wave propagation.

Multifunctional Land-Use Systems for Managing the Nexus of Environmental Resources Lulu Zhang, Kai Schwärzel, 2017-04-08. This book comprehensively describes the major ecosystem services in dryland environments that are

provided by typical land use including forestland grassland and farmland using the Loess Plateau Northwest China as an example It offers extensive information on land policy implementation and scientific evidence and discusses the restoration of the degraded Loess Plateau environment which that brings new challenges in the sustainable use of natural resources in particular soil and water It presents a transdisciplinary and up to date understanding of interlinkages and competition between different ecosystem services and illustrates benefit sharing among different users and stakeholders land management practitioners and local governments It is a major contribution to the on going debate on future land development strategies and identifies areas where there is a need for more research This book is a valuable resource for students scientists and policy makers *Construction Site Erosion and Sediment Controls* Robert Pitt, Shirley E. Clark, Donald W. Lake, 2007 Contains critical design tools for practical implementation of techniques to control and abate run off and sediment from construction sites *Scientific and Technical Aerospace Reports*, 1995 *Self-Harm: Suicidal and Non-Suicidal Behaviors* Michael Kaess, Nancy Lee Heath, Marco Sarchiapone, Paul L. Plener, 2022-01-25 [Fashion Recommender Systems](#) Nima Dokoohaki, 2020-11-04 This book includes the proceedings of the first workshop on Recommender Systems in Fashion 2019 It presents a state of the art view of the advancements within the field of recommendation systems with focused application to e commerce retail and fashion The volume covers contributions from academic as well as industrial researchers active within this emerging new field Recommender Systems are often used to solve different complex problems in this scenario such as social fashion based recommendations outfits inspired by influencers product recommendations or size and fit recommendations The impact of social networks and the influence that fashion influencers have on the choices people make for shopping is undeniable For instance many people use Instagram to learn about fashion trends from top influencers which helps them to buy similar or even exact outfits from the tagged brands in the post When traced customers social behavior can be a very useful guide for online shopping websites providing insights on the styles the customers are really interested in and hence aiding the online shops in offering better recommendations and facilitating customers quest for outfits Another well known difficulty with recommendation of similar items is the large quantities of clothing items which can be considered similar but belong to different brands Relying only on implicit customer behavioral data will not be sufficient in the coming future to distinguish between for recommendation that will lead to an item being purchased and kept vs a recommendation that might result in either the customer not following it or eventually return the item Finding the right size and fit for clothes is one of the major factors not only impacting customers purchase decision but also their satisfaction from e commerce fashion platforms Moreover fashion articles have important sizing variations Finally customer preferences towards perceived article size and fit for their body remain highly personal and subjective which influences the definition of the right size for each customer The combination of the above factors leaves the customers alone to face a highly challenging problem of determining the right size and fit during their purchase journey

which in turn has resulted in having more than one third of apparel returns to be caused by not ordering the right article size This challenge presents a huge opportunity for research in intelligent size and fit recommendation systems and machine learning solutions with direct impact on both customer satisfaction and business profitability

Forensic Engineering
Stephen E. Petty, 2013-01-04 A comprehensive resource that builds a bridge between engineering disciplines and the building sciences and trades *Forensic Engineering Damage Assessments for Residential and Commercial Structures* provides an extensive look into the world of forensic engineering With a focus on investigations associated with insurance industry claims the book describes methodologies for performing insurance related investigations including the causation and origin of damage to residential and commercial structures and or unhealthy interior environments and adverse effects on the occupants of these structures Edited by an industry expert with more than 30 years of experience and authors with more than 100 years of experience in the field the book takes the technical aspects of engineering and scientific principles and applies them to real world issues in a non technical manner It provides readers with the experiences investigation methodologies and investigation protocols used in and derived from completing thousands of forensic engineering investigations It begins with providing a baseline methodology for completing forensic investigations and closes with advice on testifying as an expert witness Much of what must be known in this field is not learned in school but is based upon experience since recognizing the cause of a building system failure requires a blending of skills from the white collar and blue collar worlds Such knowledge can be vital since failures e g water entry often result from construction activities completed out of sequence This book details proven methodologies based on over 7 000 field investigations methodologies which can be followed by both professionals and laymen alike

Geography of Climate Change Richard Aspinall, 2013-09-13 Climate change is one of the inescapable themes of current times Climate change confronts society in issues as diverse as domestic and international political debate and negotiation discussion in the media and public opinion land management choices and decisions and concerns about environmental social and economic priorities now and for the future Climate change also spans spatial temporal and organisational scales and has strong links with nature society relationships environmental dynamics and vulnerability Understanding the full range of possible consequences of climate change is essential for informed decision making and debate This book provides a collection of chapters that span environmental social and economic aspects of climate change Together the chapters provide a diverse and contrasting series that highlights the need to analyze review and debate climate change and its possible impacts and consequences from multiple perspectives The book also is intended to promote discussion and debate of a more integrated inclusive and open approach to climate change and demonstrates the value of geography in addressing climate change issues This book was originally published as a special issue of *Annals of the Association of American Geographers*
