Questions

Below is a list of questions to be addressed as a result of this requirements document:

Question	Outcome
What about Google Apps	<ul style="list-style-type: none">• We think this is important, but not for version one.• We can look at this at a later stage.• 💡 It might be worth someone looking into a shared notification library to do this.
Are we supporting Blackberry?	<ul style="list-style-type: none">• Again, not for initial version - but we haven't had much demand for this.
Should we have an offline mode?	<ul style="list-style-type: none">• We've talked about the pros and cons. In brief:<ul style="list-style-type: none">➕ Seamless experience for customers, they won't notice if there is a connection issue➕ Most of our competitors don't have this➖ Could be expensive to build❓ Should we spike this at a later sprint?

Not Doing

- Google Apps Authentication - out of scope, see above for details
- Blackberry support - we won't look at doing this, if demand picks up we can look at it.
- Native app. We are starting with a mobile web view first and get back to a native app depending on feedback that we get.

Risk Centric Threat Modeling Tony UcedaVelez,Marco M. Morana,2015-05-12 This book introduces the Process for Attack Simulation Threat Analysis PASTA threat modeling methodology It provides an introduction to various types of application threat modeling and introduces a risk centric methodology aimed at applying security countermeasures that are commensurate to the possible impact that could be sustained from defined threat models vulnerabilities weaknesses and attack patterns This book describes how to apply application threat modeling as an advanced preventive form of security The authors discuss the methodologies tools and case studies of successful application threat modeling techniques Chapter 1 provides an overview of threat modeling while Chapter 2 describes the objectives and benefits of threat modeling Chapter 3 focuses on existing threat modeling approaches and Chapter 4 discusses integrating threat modeling within the different types of Software Development Lifecycles SDLCs Threat modeling and risk management is the focus of Chapter 5 Chapter 6 and Chapter 7 examine Process for Attack Simulation and Threat Analysis PASTA Finally Chapter 8 shows how to use the PASTA risk centric threat modeling process to analyze the risks of specific threat agents targeting web applications This chapter focuses specifically on the web application assets that include customer s confidential data and business critical functionality that the web application provides Provides a detailed walkthrough of the PASTA methodology alongside software development activities normally conducted via a standard SDLC process Offers precise steps to take when combating threats to businesses Examines real life data breach incidents and lessons for risk management Risk Centric Threat Modeling Process for Attack Simulation and Threat Analysis is a resource for software developers architects technical risk managers and seasoned security professionals

Pro Apache Ant Matthew Moodie,2006-11-07 Pro Apache Ant is ideal for Java developers who need to use the leading open source build tool out there for development and project management It is organized around chronological tasks instead of alphabetical functions using a sample application throughout the set up from calling database scripts to unit testing Practical examples are used at every stage and each task includes a concrete example The configuration files are XML based so there s no need for you to write shell commands Each task is run by an object that implements a particular task interface And if you really need to execute a shell command Ant has a task that allows different commands based on the operating system

Document Analysis Systems VI Simone Marinai,Andreas Dengel,2004-12-10

This volume contains papers selected for presentation at the 6th IAPR Workshop on Document Analysis Systems DAS 2004 held

during September 8-10 2004 at the University of Florence Italy Several papers represent the state of the art in a broad range of traditional topics such as layout analysis applications to graphics recognition and handwritten documents Other contributions address the description of complete working systems which is one of the strengths of this workshop Some papers extend the application domains to other media like the processing of Internet documents The peculiarity of this 6th workshop was the large number of papers related to digital libraries and to the processing of historical documents a taste which frequently requires the analysis of color documents A total of 17 papers are associated with these topics whereas two years ago in DAS 2002 only a couple of papers dealt with these problems In our view there are three main reasons for this new wave in the DAS community From the scientific point of view several research fields reached a thorough knowledge of techniques and problems that can be effectively solved and this expertise can now be applied to new domains Another incentive has been provided by several research projects funded by the EC and the NSF on topics related to digital libraries
