

Questions

Below is a list of questions to be addressed as a result of this requirements document:

Question	Outcome
What about Google Apps	<ul style="list-style-type: none">• We think this is important, but not for version one.• We can look at this at a later stage.• 💡 It might be worth someone looking into a shared notification library to do this.
Are we supporting Blackberry?	<ul style="list-style-type: none">• Again, not for initial version - but we haven't had much demand for this.
Should we have an offline mode?	<ul style="list-style-type: none">• We've talked about the pros and cons. In brief:<ul style="list-style-type: none">➕ Seamless experience for customers, they won't notice if there is a connection issue➕ Most of our competitors don't have this➖ Could be expensive to build❓ Should we spike this at a later sprint?

Not Doing

- Google Apps Authentication - out of scope, see above for details
- Blackberry support - we won't look at doing this, if demand picks up we can look at it.
- Native app. We are starting with a mobile web view first and get back to a native app depending on feedback that we get.

The Definitive Guide to Quality Application Delivery
Don Jones,2008 *Fundamental Approaches to Software Engineering* Vittorio Cortellessa,Dániel Varró,2013-02-17 This book constitutes the proceedings of the 16th International Conference on Fundamental Approaches to Software Engineering FASE 2013 held as part of the European Joint Conference on Theory and Practice of Software ETAPS 2013 which took place in Rome Italy in March 2013 The 25 papers presented in this volume were carefully reviewed and selected from 112 submissions They are organized in topical sections named model driven engineering verification and validation software comprehension analysis tools model driven engineering applications model transformations and testing Socio-technical Design of Ubiquitous Computing Systems Klaus David,Kurt Geihs,Jan Marco Leimeister,Alexander Roßnagel,Ludger Schmidt,Gerd Stumme,Arno Wacker,2014-07-28 By using various data inputs ubiquitous computing systems detect their

current usage context automatically adapt their services to the user's situational needs and interact with other services or resources in their environment on an ad hoc basis. Designing such self-adaptive context-aware knowledge processing systems is in itself a formidable challenge. This book presents core findings from the VENUS project at the Interdisciplinary Research Center for Information System Design ITeG at Kassel University where researchers from different fields such as computer science, information systems, human computer interaction, and law together seek to find general principles and guidelines for the design of socially aware ubiquitous computing systems. To this end, system usability, user trust in the technology, and adherence to privacy laws and regulations were treated as particularly important criteria in the context of socio-technical system design. During the project, a comprehensive blueprint for systematic interdisciplinary software development was developed covering the particular functional and non-functional design aspects of ubiquitous computing at the interface between technology and human beings. The organization of the book reflects the structure of the VENUS work program. After an introductory part I, part II provides the groundwork for VENUS by presenting foundational results from all four disciplines involved. Subsequently, part III focuses on methodological research, funneling the development activities into a common framework. Part IV then covers the design of the demonstrators that were built in order to develop and evaluate the VENUS method. Finally, part V is dedicated to the evaluation phase to assess the user acceptance of the new approach and applications. The presented findings are especially important for researchers in computer science, information systems, and human computer interaction but also for everyone working on the acceptance of new technologies in society in general.

The Digital Document Bruce Duyshart, 2013-02-01 Documents such as drawings, memos, and specifications form an essential function in the design and construction industry. Throughout the lifecycle of a built asset, starting from an initial design idea right through to a final built form and its ongoing management, thousands even millions of documents can be used to convey various forms of information to a range of interested parties. In many ways, therefore, the success of a design or construction-based company relies upon an understanding of the use of documents as well as the technologies and techniques that are used to create them. *The Digital Document* provides an extensive background to the issues and technologies surrounding this very important topic. It examines a technical subject in an insightful manner that is neither intimidating nor confusing even to the novice computer user. By introducing the subject through a series of preliminary reviews of current practices and essential computing technologies, the reader is able to better appreciate the benefits and capabilities of a wide range of digital document types. This book explores the role of documents in a professional practice, examines the components, capabilities, viability, and use of digital documents in the design and construction industry, and identifies and explains many of the standards in use today. In order to facilitate a better understanding of digital document technologies, a number of essential reviews are provided, including the definition and purpose of a document, how documents are typically used by design professionals, the nature of the digital document environment, the data types which make up

digital documents The Digital Document is an essential reference for the architect engineer or design professional that wants to find out more about effective communication in the digital workplace Bruce Duyshart is an IT Project Manager with Lend Lease Corporation and specialises in the development and implementation of digital media and information management technologies on design and construction projects He holds a Masters degree in Architecture and is also an academic associate of the Faculty of Architecture Building and Planning at the University of Melbourne He has written numerous papers on emerging technologies in the architecture engineering and construction industry and has developed Internet web sites for the Royal Australian Institute of Architects and Architecture Media

Requirements Engineering for Software and Systems Phillip A. Laplante, 2017-10-24 Solid requirements engineering has increasingly been recognized as the key to improved on time and on budget delivery of software and systems projects This textbook provides a comprehensive treatment of the theoretical and practical aspects of discovering analyzing modeling validating testing and writing requirements for systems of all kinds with an intentional focus on software intensive systems It brings into play a variety of formal methods social models and modern requirements for writing techniques to be useful to the practicing engineer This book was written to support both undergraduate and graduate requirements engineering courses Each chapter includes simple intermediate and advanced exercises Advanced exercises are suitable as a research assignment or independent study and are denoted by an asterisk Various exemplar systems illustrate points throughout the book and four systems in particular a baggage handling system a point of sale system a smart home system and a wet well pumping system are used repeatedly These systems involve application domains with which most readers are likely to be familiar and they cover a wide range of applications from embedded to organic in both industrial and consumer implementations Vignettes at the end of each

chapter provide mini case studies showing how the learning in the chapter can be employed in real systems Requirements engineering is a dynamic field and this text keeps pace with these changes Since the first edition of this text there have been many changes and improvements Feedback from instructors students and corporate users of the text was used to correct expand and improve the material This third edition includes many new topics expanded discussions additional exercises and more examples A focus on safety critical systems where appropriate in examples and exercises has also been introduced Discussions have also been added to address the important domain of the Internet of Things Another significant change involved the transition from the retired IEEE Standard 830 which was referenced throughout previous editions of the text to its successor the ISO IEC IEEE 29148 standard
