

Writing Chemical Formulas and Balancing Chemical Equations Webquest

This activity goes with Chapter 9 in your textbook.

LET'S BEGIN.

Start by reading the following review of how to name compounds.

First let's review how to name compounds.

REMEMBER, if it is ionic (metal + nonmetal), you write the name of the metal first and end the nonmetal with -ide. If you are writing the formula then you have to make the cation and anion charges (also called oxidation numbers) equal zero. For example, potassium sulfide contains the metal cation K with a charge of +1 and the nonmetal anion S with a charge of -2. So we would need 2 +1 for every 1 -2 ($+1+1-2=0$). The formula would be K_2S .

To figure out cation and anion charges look at the periodic table. Group 1 has a +1 charge, group 2 has a +2, group 13 (where Al is) has a +3, skip group 14 because they don't form ions, group 15 has a -3 charge, group 16 has a -2 charge, group 17 has a -1 charge, and group 18 doesn't react.

periodic table group	1 or alkali metals	2 or alkaline earth metals	13 or Aluminum	14 or Carbon Family	15 or Nitrogen Family	16 or Oxygen Family	17 or Halogens	18 or Noble Gases
charge	+1	+2	+3	Don't form ions	-3	-2	-1	Don't react

Transition metal (the short columns in the middle of the table) charges are given to you in the form of Roman numerals. (I) = +1, (II) = +2, (III) = +3, (IV) = +4.

Polyatomic ions are compounds that have a charge. You have your polyatomic cheat sheet to use whenever you need them.

polyatomic ion	formula	charge
carbonate	CO_3	-2
sulfate	SO_4	-2
ammonium	NH_4	+1
nitrate	NO_3	-3

For covalent compounds (nonmetal + nonmetal) you use prefixes to name the compound. The prefix stands for how many of that atom there are in the compound. You must know the prefixes for the test. For example, carbon dioxide

Managing Organizations for Sustainable Development in Emerging Countries Angappa Gunasekaran, Charbel José Chiappetta Jabbour, Ana Beatriz Lopes de Sousa Jabbour, 2017-10-02

Managing Organizations for Sustainable Development in Emerging Countries focuses on the main challenges and opportunities of managing firms and emerging economies in the light of sustainable development. One of the key questions of sustainable development is how organizations from developing countries are achieving their economic goals while considering simultaneously environmental issues like conservation of natural resources, eco efficiency, biodiversity conservation, and climate change mitigation. These questions are relevant for government, industry, and urban sustainability. However, in the modern literature that discusses organizational management for sustainable development, few studies focus on the reality of organizations from emerging countries. Moreover, changing environmental legislation in emerging countries such as China and Brazil will affect organizational managers. In this context, this book may contribute to organizational management in the search for more sustainable organizations as well as deal with the challenges of managing organizations in the context of increased social problems, degradation of natural resources, loss of biodiversity, and climate change. This book was published as a special issue of the International Journal of Sustainable Development World Ecology.
